Specificity/Sensitivity	NB100-63244 recognizes tumour necrosis factor receptor 1-associated death domain protein (TRADD) isoform 2, a 28kDa death domain containing protein. TRADD is expressed in most tissues. It mediates programmed cell death signalling and NF-kappa beta activation through interaction with tumour necrosis factor receptor superfamily, member 1A. By binding the adaptor protein TRAF2, TRADD reduces the recruitment of inhibitor-of-apoptosis proteins, inhibiting TRAF2 mediated apoptosis. TRADD is also involved in the Fas-induced cell death pathway via its interaction with tumour necrosis factor receptor superfamily, member-6/FAS and adaptor protein FADD/MORT1.
Immunogen	Peptide sequence C-AAGQNGHEEWVG corresponding to the N-terminus of TRADD (NP_700474).
