Lightning-Link (R) Rapid DyLight 755 Antibody Labeling Kit

use of this product. Storage Store at -20C. Conjugate DyLight 755 Product Description Lightning-Link Rapid is an innovative technology that enables direct labeling of proteins, peptides or other biomolecules for use in R&D applications, drug discovery and the development of diagnostic kits (See protocol for further information). The easy-to-use, one step procedure allows researchers to covalently label biomolecules with only 30 seconds hands-on time; furthermore conjugates are ready to use in less than twenty minutes. The researcher simply pipettes the biomolecule into a vial of lyophilized mixture containing the label of interest and incubates (for more details please watch the video below). FeaturesBenefitsQuick and easy to useSave time, no special knowledge requiredNo separation steps 100% recovery - no antibody/protein lossCan be used in a wide range of applications. Flexible Freeze diredShips at ambient temperature, long shell-life-lilly scalable (10 ug to 1 g or more)Easy transfer from R&D to marufacturingStringently QC testedConsistent high quality, excellent batch-to-batch reproducibilityLarge number of labels available Experimental flexibilityReliable: nearly 300 referencesSuccessfully used in many fields of research DyLight 755 provides far red fluorescence for a wide array of fluorescence labeling-based applications. It has a strong absorption at 756mm, high fluorescence at 794nm (extinction coefficient 2.2 x105 cm-1M-1) and high quantum yield. Product Application Details

Application Notes

By circumventing the desalting or dialysis steps that commonly interrupt traditional antibody conjugation procedures, LightningLink technology can be used to label both small (e.g. 10 ug) and large quantities of primary antibodies with ease. Batch-to-batch variation upon scale up is minimal as the process is so simple, and recoveries are always 100%.
