NB100-56093**BFAR Antibody**

Product Information	
Unit Size	0.05 ml
Concentration	This product is unpurified. The exact concentration of antibody is not quantifiable.
Storage	Store at 4C short term. Aliquot and store at -20C long term. Avoid freeze-thaw cycles.
Clonality	Polyclonal
Preservative	0.05% Sodium Azide
Isotype	IgG
Purity	Unpurified
Buffer	Whole antisera

Product Description	
Host	Rabbit
Gene ID	51283
Gene Symbol	BFAR
Species	Human
Immunogen	A synthetic peptide corresponding to amino acids 3-21 (EPQKSYVNTMDLERDEPLK) of human BAR was used as immunogen; GenBank no. NP_057645.1. Human BAR is a 450 amino acid protein.

Product Application Details	
Applications	Western Blot, Immunohistochemistry, Immunohistochemistry-Paraffin, Immunoprecipitation
Recommended Dilutions	Western Blot 1:1000-1:2000, Immunohistochemistry, Immunoprecipitation 1:50-1:200, Immunohistochemistry-Paraffin 1:1000-1:5000

Images

Western Blot: BFAR Antibody [NB100-56093] - Analysis of BAR in normal prostate and prostate carcinoma tissue lysates. 25 ug protein was loaded per lane. Tissue lysates from 15 different prostate carcinoma patients show variable expression of BAR with respect to banding patterns and amount of BAR expression. Major BAR bands typically migrate as a single band or as a doublet. These bands are typically observed at ~50-54 kDa. This is higher than the predicted molecular weight from the 450 amino acid BAR sequence, and may represent phosphorylation or other post-translational modifications. N = tissue lysate from normal prostate.

Immunohistochemistry-Paraffin: BFAR Antibody [NB100-56093] - Formalin-fixed, paraffin-embedded human prostate carcinoma tissue array stained for BAR expression using this antibody at 1:2000. Hematoxylin-eosin counterstain. Variable BAR expression is seen between patient samples.

Immunohistochemistry-Paraffin: BFAR Antibody [NB100-56093] - Formalin-fixed, paraffin-embedded tissue sections stained for BAR expression using this antibody at 1:2000. A. Two cores from a human glioblastoma tissue microarray: 1 = fibrillary astrocytoma (grade I), and 2 = anaplastic glioma (grade III). B. Higher magnification from the fibrillary astrocytoma (shown in A). C. Higher magnification from the anaplastic glioma (shown in A). D. Normal human brain striatum with positive medium spiny neurons, the major neuronal cell type of the striatum. Hematoxylin-eosin counterstain.
