Details:

HAP1 antibody used for WB analysis of total cell lysates as well as the pulldowns performed in COS-7 cells which were co-transfected with HAP1 alone or with either PKG I α or PKG I β (FIGURE 2). WB also performed on lysates and proteins pulled down in COS-7 cells co-expressing PKG I β -GFP plasmid with HAP1-DSRed construct (Control), HAP1-DSRed bearing the double mutation K567A/R568A, and C-terminal truncated HAP1-DSRed construct /HAP1 amino acids 157-386 (FIGURE 6).

Details:

6 week-old female WT and cGKI-KO mice (carrying a null mutation of the *prkg1* gene, also termed cGKIL-/- mice) on a 129/Sv background were sacrificed and cerebella were kept frozen until testing. The tissues were lysed by sonication in lysis buffer and processed for WB using mouse anti-Huntingtin associated protein 1 (HAP1, Novus biological, 1:5000). HAP1 showed an increased expression in the cerebellum of cGKI-KO mice.
