Product Datasheet

Ki-67/MKI67 Antibody
NB110-89719

Unit Size: 0.1 ml
Store at 4C. Do not freeze.

| **Application Notes** | This Ki67 antibody is useful for Immunohistochemistry paraffin embedded sections and Immunocytochemistry/Immunofluorescence. Immunohistochemistry-Frozen and Western Blot were reported in scientific literature. Use in FLOW cytometry reported in scientific literature ( PMID 25733567)  

The observed molecular weight of the protein may vary from the listed predicted molecular weight due to post translational modifications, post translation cleavages, relative charges, and other experimental factors.
Immunocytochemistry/Immunofluorescence: Ki67 Antibody [NB110-89719] - Ki67 antibody was tested in SH-SY5Y cells with DyLight 488 (green). Nuclei and alpha-tubulin were counterstained with DAPI (blue) and Dylight 550 (red).

**Publications**

**Details:**

Ki-67/MKI67 antibody used for IHC-P on murine jejunal tissue sections in experiments involving the modulatory effects of a Japanese Traditional Herbal Medicine called Saireito on 5-Fluorouracil-Induced Intestinal Mucositis in Mice. IHC-P Assay involved - 10% neutralized formalin fixation of tissues, paraffin embedding followed by 4um sectioning, antigen retrieval with HistoVT One solution/90C for 20 minutes in water bath, endogenous peroxidases blocked with 3%H2O2, primary detection with Vectastain Elite ABC rabbit IgG kit followed by counter-staining with hematoxylin (Figure 6).

Procedures

Immunohistochemistry Protocol specific for Ki67 Antibody (NB110-89719)

Antigen Unmasking
Bring slides to a boil in 10 mM sodium citrate buffer pH 6.0 then maintain at a sub-boiling temperature for 10 minutes. Cool slides on bench top for 30 minutes.
Wash sections in dH2O three times for 5 minutes each.
Wash section in wash buffer for 5 minutes.
Block each section with 100-400 ul blocking solution (1X PBST, 5% goat serum) for 1 hour at room temperature.
Remove blocking solution and add 100-400 ul primary antibody diluted in 1X PBST, 5% goat serum to each section. Incubate overnight at 4C.
Remove antibody solution and wash sections in wash buffer three times for 5 minutes each.
Add 100-400 ul biotinylated secondary antibody, diluted in 1X PBST, 5% goat serum. Incubate 30 minutes at room temperature.
Remove secondary antibody solution and wash sections three times with wash buffer for 5 minutes each.
Add 100-400 ul Striptavidin-HRP reagent to each section and incubate for 30 minutes at room temperature.
Wash sections three times in wash buffer for 5 minutes each.
Add 100-400 ul DAB substrate to each section and monitor staining closely.
As soon as the sections develop, immerse slides in dH2O.
Wash sections in dH2O two times for 5 minutes each.
Mount coverslips.

Immunocytochemistry/Immunofluorescence Protocol for Ki67 antibody (NB110-89719)

Culture cells to appropriate density in 35 mm culture dishes or 6-well plates.

1. Remove culture medium and add 10% formalin to the dish. Fix at room temperature for 30 minutes.
2. Remove the formalin and add ice cold methanol. Incubate for 5-10 minutes.
3. Remove methanol and add washing solution (i.e. PBS). Be sure to not let the specimen dry out.
Wash three times for 10 minutes.
4. To block nonspecific antibody binding incubate in 10% normal goat serum from 1 hour to overnight at room temperature.
5. Add primary antibody at appropriate dilution and incubate at room temperature from 2 hours to overnight at room temperature.
6. Remove primary antibody and replace with washing solution. Wash three times for 10 minutes.
7. Add secondary antibody at appropriate dilution. Incubate for 1 hour at room temperature.
8. Remove antibody and replace with wash solution, then wash for 10 minutes. Add Hoechst 33258 to wash solution at 1:25,000 and incubate for 10 minutes. Wash a third time for 10 minutes.
9. Cells can be viewed directly after washing. The plates can also be stored in PBS containing Azide covered in Parafilm (TM). Cells can also be cover-slipped using Fluoromount, with appropriate sealing.
