Product Application Details	
Applications	Block/Neutralize
Recommended Dilutions	Block/Neutralize
Application Notes	Neutralization Dose (ND50) is defined as the concentration of antibody required to yield one-half maximal inhibition of the cytokine activity on a responsive cell line, when that cytokine is present at a concentration just high enough to elicit a maximum response. The ND50 is approximately 0.5 - 2 ug/ml in the presence of 0.1 ug/ml of human MIP-1beta, using the human monocyte chemotaxis assay. Not tested in other applications. Optimal dilutions/concentrations should be determined by the end user.
