Product Datasheet

FFAR4/GPR120 Antibody - BSA Free
NBP1-00858

Unit Size: 0.1 mg

Store at 4C short term. Aliquot and store at -20C long term. Avoid freeze-thaw cycles.

Reviews: 1  Publications: 20

Images

Knockout Validated: FFAR4/GPR120 Antibody [NBP1-00858] - 3T3-L1 cells were exposed to DHA (100 i1/4M) for 2 d in the presence of the differentiation medium. The expression of GPR120, corin and ANP was measured in the GPR120 deficient adipocytes treated with DHA by Western blotting. Image collected and cropped by Citeab from the following publication (Expression and Secretion of an Atrial Natriuretic Peptide in Beige-Like 3T3-L1 Adipocytes. Int J Mol Sci (2019) licensed under a CC-BY license.)
Immunohistochemistry-Paraffin: FFAR4/GPR120 Antibody [NBP1-00858] - IHC analysis of formalin fixed paraffin embedded tissue section of mouse intestine using FFAR4/GPR120 antibody at 1:200 dilution. The intestinal epithelial cells showed an expected cytoplasmic staining (immunogen of NBP1-00858 corresponds to the cytoplasmic domain of GPR120 protein), while some cells especially the goblet cells population depicted nuclear positivity also. The observed nuclear signal may be justified on the fact that - some GPCRs are known for nuclear translocation upon binding to extracellular or endogenous/non-secreted ligands, wherein they impact the transcriptional regulation via GPCR-heterotrimeric G-protein-effector complexes.

Western Blot: FFAR4/GPR120 Antibody [NBP1-00858] - Analysis of GPR120 (V259) antibody in extracts from LOVO cells.

Western Blot: FFAR4/GPR120 Antibody [NBP1-00858] - GPR120 expression in mouse spleen cells (1), bone marrow (2), bone marrow derived DC (3) and macrophages (4). This image was submitted through a verified customer review.

Immunocytochemistry/Immunofluorescence: FFAR4/GPR120 Antibody [NBP1-00858] - GPR120 antibody was tested at 1:50 in HeLa cells with Dylight 488 (green). Nuclei and alpha-tubulin were counterstained with DAPI (blue) and Dylight 550 (red). Image objective 40x.
Immunohistochemistry-Paraffin: FFAR4/GPR120 Antibody [NBP1-00858] - IHC analysis of formalin fixed paraffin embedded tissue section of mouse intestine using FFAR4/GPR120 antibody at 1:200 dilution. The intestinal epithelial cells showed an expected cytoplasmic staining (immunogen of NBP1-00858 corresponds to the cytoplasmic domain of GPR120 protein), while some cells especially the goblet cells population depicted nuclear positivity also. The observed nuclear signal may be justified on the fact that some GPCRs are known for nuclear translocation upon binding to extracellular or endogenous/non-secreted ligands, wherein they impact the transcriptional regulation via GPCR-heterotrimeric G-protein-effector complexes.

### Western Blot Protocol

1. Perform SDS-PAGE using a 12% gel on samples to be analyzed, loading 25 ug of total protein per lane.
2. Transfer proteins to membrane according to the instructions provided by the manufacturer of the membrane and transfer apparatus.
3. Stain according to standard Ponceau S procedure (or similar product) to assess transfer success, and mark molecular weight standards where appropriate.
4. Rinse the blot.
5. Block the membrane using standard blocking buffer for at least 1 hour.
6. Wash the membrane in wash buffer three times for 10 minutes each.
7. Dilute anti-GPR120 primary antibody in blocking buffer and incubate 1 hour at room temperature.
8. Wash the membrane in wash buffer three times for 10 minutes each.
9. Apply the diluted HRP conjugated secondary antibody in blocking buffer (as per manufacturers instructions) and incubate 1 hour at room temperature.
10. Wash the blot in wash buffer three times for 10 minutes each (this step can be repeated as required to reduce background).
11. Apply the detection reagent of choice in accordance with the manufacturers instructions. Note: Tween-20 can be added to the blocking or antibody dilution buffer at a final concentration of 0.05-0.2%.

### Immunocytochemistry/Immunofluorescence Protocol

1. Remove culture medium and add 10% formalin to the dish. Fix at room temperature for 30 minutes.
2. Remove the formalin and add ice cold methanol. Incubate for 5-10 minutes.
3. Remove methanol and add washing solution (i.e. PBS). Be sure to not let the specimen dry out. Wash three times for 10 minutes.
4. To block nonspecific antibody binding incubate in 10% normal goat serum from 1 hour to overnight at room temperature.
5. Add primary antibody at appropriate dilution and incubate at room temperature from 2 hours to overnight at room temperature.
6. Remove primary antibody and replace with washing solution. Wash three times for 10 minutes.
7. Add secondary antibody at appropriate dilution. Incubate for 1 hour at room temperature.
8. Remove antibody and replace with wash solution, then wash for 10 minutes. Add Hoechst 33258 to wash solution at 1:25,000 and incubate for 10 minutes. Wash a third time for 10 minutes.
9. Cells can be viewed directly after washing. The plates can also be stored in PBS containing Azide covered in Parafilm (TM). Cells can also be cover-slipped using Fluoromount, with appropriate sealing.

*The above information is only intended as a guide. The researcher should determine what protocol best meets their needs. Please follow safe laboratory procedures.*
Limitations
This product is for research use only and is not approved for use in humans or in clinical diagnosis. Primary Antibodies are guaranteed for 1 year from date of receipt.
