Gene ID 3537	
Gene Symbol IGLC1	
Species Human	
Marker B-Cell Marker	
Specificity/Sensitivity This monoclonal antibody is specific to lambda light chain of immunoglobul shows no cross-reaction with lambda light chain or any of the five heavy chain mammals, the two light chains in an antibody are always identical, with cone type of light chain, kappa or lambda. The ratio of Kappa to Lambda is a However, with the occurrence of multiple myeloma or other B-cell malignant this ratio is disturbed. Antibody to the lambda light chain is reportedly useful the identification of leukemias, plasmacytomas, and certain non-Hodgkins lymphomas. Demonstration of clonality in lymphoid infiltrates indicates that infiltrate is malignant.	ains. nly ′0:30. cies I in
