Immunohistochemistry-Paraffin: EGFR Antibody (GFR1195) [NBP2-45150] - Human Placenta stained with EGFR Monoclonal Antibody (GFR1195).

Protein Array: EGFR Antibody (GFR1195) [NBP2-45150] - Analysis of Protein Array containing more than 19,000 full-length human proteins using EGFR Antibody (GFR1195) Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (Monoclonal Antibody) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProt(TM) array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProt(TM) are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a Monoclonal Antibody to its intended target. A Monoclonal Antibody is considered to specific to its intended target, if the Monoclonal Antibody has an S-score of at least 2.5.
