NBP2-47118**Breast Matched Tumor and Normal Tissue Lysate**

Product Information	
Unit Size	2 Vials
Concentration	mg/ml
Storage	Store at -80C. Avoid freeze-thaw cycles.
Product Description	
Description	<p>1 x Human breast tumor tissue lysate (1 mg/ml, 100 ug/vial) 1 x Human breast normal tissue lysate (matched) (1 mg/ml, 100 ug/vial)</p> <p>Matched Tumor & Normal Tissue Lysate Set</p> <p>Diagnosis: Infiltrating ductal carcinoma</p> <p>Sex: Female</p> <p>Age: 47</p> <p>Grade: 1</p> <p>Stage: IIIA, T3N1M0</p> <p>Tumor Pathology Data</p> <p>Location: Left Breast</p> <p>Gross findings: Tumor size 6 cm, ill demarcated. Cut section firm and white. Ipsilateral axillary lymph nodes examined: 10</p> <p>Microscopic findings</p> <p>The tumor is composed of proliferation of malignant epithelial cells. The epithelial cells grown in the enlarged ducts contained comedo-necroses. The tumor cells have irregular, basophilic nuclei and abundant cytoplasm. Nuclear chromatin is coarse with prominent nuclei. Mitotic figures are abundant. Some areas show micro-invasions. The stroma is infiltrated by numerous inflammatory cells. The lymph nodes show metastasis (6/10).</p> <p>Preparation Method</p> <p>Tissue specimens are homogenized in modified RIPA buffer to obtain the soluble proteins, and centrifuged to clarify. Extraction 1: PBS, pH 7.4; 1 ug/ml Aprotinin; 1 mM NaF Modified RIPA Buffer: 1 mM EDTA; 1 ug/ml Pepstatin-A; 0.1% SDS; 0.25% Na deoxycholate; 1 ug/ml Leupeptin; 1 mM PMSF; 1 mM Na3VO4</p>
Species	Human
Notes	<p>The vial is provided with a 10% overfill. Maximum recovery can be obtained by centrifuging the vial briefly to collect any solution on the cap and tube sides.</p> <p>This material has tested negative for HbsAg, HIV 1/2, and HCV. Use UNIVERSAL PRECAUTIONS when handling. Human tissue derivatives must be treated as a potentially infectious agent and disposed of appropriately</p>

Lysate Type	Matched Tumor and Normal Tissue
Lysate Tissue	Breast
Lysate Life Stage	Adult

Product Application Details

Application Notes	<p>These lysates have not been subjected to denaturing or reducing conditions. This allows the tissue or cell lysate to be used in a variety of applications; to study protein-protein interaction, ligand binding, ELISA, immunoprecipitation, 1D and 2D gel electrophoresis, and Western blotting for the detection of specific protein targets.</p> <p>For use in 1D and 2D gel electrophoresis, the addition of a denaturing gel loading buffer with reducing agents may be required.</p> <p>Buffer requirements for performing protein-protein interaction and ligand binding studies can vary significantly from RIPA buffer and may require modifications. In most cases, tissue lysates in RIPA buffer can be used, directly in standard ELISA and immunoprecipitation assays.</p> <p>These lysates are proteomic discovery tools. Researchers should validate and optimize for individual use.</p>
