NBP2-49890PE

Siglec-2/CD22 Antibody (RFB4) [PE]

Product Information	
Unit Size	2 ml
Concentration	Please see the vial label for concentration. If unlisted please contact technical services.
Storage	Store at 4C in the dark.
Clonality	Monoclonal
Clone	RFB4
Preservative	0.05% Sodium Azide
Isotype	IgG1
Conjugate	PE
Purity	Protein A or G purified
Buffer	PBS (pH 7.2) and 1.0% (w/v) BSA

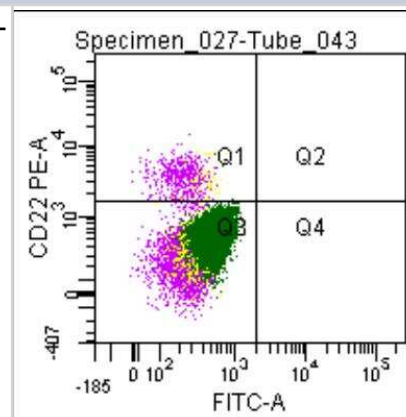

Product Description	
Description	For stability reasons this monoclonal antibody solution contains sodium azide. These reagents should be stored at 2-8C (DO NOT FREEZE!) and protected from prolonged exposure to light. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance or the concentration of the product. Stability of the reagent: Please refer to the expiry date printed onto the vial. The use of the reagent after the expiration date is not recommended.
Host	Mouse
Gene ID	933
Gene Symbol	CD22
Species	Human, Canine
Reactivity Notes	Use in Canine reported in scientific literature (PMID:31826004).
Specificity/Sensitivity	This antibody recognizes surface Siglec-2/CD22 expressed by mature peripheral B-cells and cytoplasmatic Siglec-2/CD22 expressed by precursor B-cells. The sensitivity is determined by staining well-defined blood samples from representative donors with serial-fold mAb dilutions to obtain a titration curve that allows relating the mAb concentration to the percentage of stained cells and geometric MFI (mean fluorescence intensity). For this purpose, a mAb-concentration range is selected to include both the saturation point (i.e. the mAb dilution expected to bind all epitopes on the target cell) and the detection threshold (i.e. the mAb dilution expected to represent the least amount of mAb needed to detect an identical percentage of cells). In practice, 50 ul of leukocytes containing 10^7 cells/ml are stained with 20 ul mAb of various dilutions to obtain a titration curve and to identify the saturation point and detection threshold. The final concentration of the product is then adjusted to be at least 3-fold above the detection threshold. In addition and to control lot-to-lot variation, the given lot is compared and adjusted to fluorescence standards with defined intensity.
Immunogen	135 kDa type I integral membrane protein

Product Application Details	
Applications	Flow Cytometry, Immunocytochemistry/ Immunofluorescence, Immunofluorescence
Recommended Dilutions	Flow Cytometry, Immunocytochemistry/ Immunofluorescence, Immunofluorescence
