CD25/IL-2R alpha Antibody (Basiliximab) - Chimeric
NBP2-52661-0.2mg

Unit Size: 0.2 mg

Store at 4C for up to 3 months. For longer storage, aliquot and store at -20C.

### Product Description

**Host**
Rabbit

**Gene ID**
3559

**Gene Symbol**
IL2RA

**Species**
Human, Cynomolgus Monkey, Rhesus Macaque

**Specificity/Sensitivity**
Basiliximab recognises the human IL-2R and binds to the epitope (116)ERIYHFV (122) within the extracellular domain of the CD25 subunit. Binding is abolished when 2 or more residues within the epitope are mutated. This epitope overlaps with the interaction site of CD25 and IL-2. CD25 is found in the high-affinity IL-2R ((alpha)(beta)(gamma)c) - T cells only express CD25 upon activation. IL-2 binding to IL-2R on T cells modulates proliferation and differentiation.

**Immunogen**
Basiliximab was prepared by immunizing BALB/c mice with CTC 16 cells.

</tr>
</thead>
<tbody>
<tr>
<td>Western Blot, Flow Cytometry, Immunohistochemistry, Block/Neutralize, CyTOF-ready, Immunofluorescence</td>
<td></td>
</tr>
</tbody>
</table>

**Recommended Dilutions**
Western Blot 1:100 - 1:2000, Flow Cytometry 1:10 - 1:1000, Immunohistochemistry 1:10 - 1:500, Immunofluorescence 1:10 - 1:500, CyTOF-ready, Block/Neutralize

**Application Notes**
This antibody is Cytof ready. This chimeric rabbit antibody was made using the variable domain sequences of the original Human IgG1 format, for improved compatibility with existing reagents, assays and techniques. Basiliximab is derived from the murine anti-Tac antibody. For the clinically used format, the variable regions from this antibody were grafted onto the sequence of the human IgG1 kappa constant regions. Basiliximab binding to CD25 competitively blocks the interaction of IL-2R with its ligand IL-2 on the surface of T cells. Blocking this interaction prevents T cell replication and T cell-mediated B cell activation. Basiliximab binding suppresses the immune system and inhibits the pathway activating the cellular immune response to allograft rejection. IL-2 signalling suppression can additionally prevent acute graft-versus-host disease, autoimmune disorders and malignancies such as T cell leukemias (Binder et al, 2007). Basiliximab has also been used in FC, IF, IHC and WB studies, which enables the detection of CD25.
Flow Cytometry: CD25/IL-2R alpha Antibody (Basiliximab) - Chimeric [NBP2-52661] - Flow-cytometry using anti-CD25 antibody Basiliximab (NBP2-52661) Cynomolgus monkey lymphocytes were stained with an isotype control (panel A) or the rabbit-chimeric version of Basiliximab (panel B) at a concentration of 1 ug/ml for 30 mins at RT. After washing, bound antibody was detected using a AF488 conjugated donkey anti-rabbit antibody and cells analysed on a FACSCanto flow-cytometer.

Flow Cytometry: CD25/IL-2R alpha Antibody (Basiliximab) - Chimeric [NBP2-52661] - Flow-cytometry using the anti-CD25 (IL2R) research biosimilar antibody Basiliximab. Human lymphocytes were stained with an isotype control (panel A) or the rabbit-chimeric version of Basiliximab (panel B) at a concentration of 1 ug/ml for 30 mins at RT. After washing, bound antibody was detected using a AF488 conjugated donkey anti-rabbit antibody and cells analysed on a FACSCanto flow-cytometer.

Flow Cytometry: CD25/IL-2R alpha Antibody (Basiliximab) - Chimeric [NBP2-52661] - Flow-cytometry using anti-CD25 antibody Basiliximab (NBP2-52661) Rhesus monkey lymphocytes were stained with an isotype control (panel A) or the rabbit-chimeric version of Basiliximab (panel B) at a concentration of 1 ug/ml for 30 mins at RT. After washing, bound antibody was detected using a AF488 conjugated donkey anti-rabbit antibody and cells analysed on a FACSCanto flow-cytometer.
Limitations
This product is for research use only and is not approved for use in humans or in clinical diagnosis. Primary Antibodies are guaranteed for 1 year from date of receipt.
