Application Notes	This antibody is Cytof ready. This chimeric rabbit antibody was made using the variable domain sequences of the original Mouse IgG1 format, for improved compatibility with existing reagents, assays and techniques. The antibody binds specifically to CD30/TNFRSF8, a cell membrane protein which belongs to the tumour necrosis factor receptor family. Incubation of CD30/TNFRSF8 positive L540 cells with Ki-4 antibody completely inhibits release of soluble CD30/TNFRSF8 (in contrast to Ki-3, NBP2-52682). CD30/TNFRSF8 is expressed on activated lymphocytes, and binding by its ligands TRAF2 and TRAF5 results in the activation of NF-kappaB, thereby regulating gene expression. CD30/TNFRSF8 is also associated with Hodgkin Lymphoma, and its expression acts as a tumour marker. Targeting the CD30/TNFRSF8 antigen with specific monoclonal antibodies is a possible therapy for Hodgkin's lymphoma.

Flow Cytometry: CD30/TNFRSF8 Antibody (Ki-4) - Chimeric [NBP2-52683] - Flow-cytometry using anti-CD30 antibody Ki-4. Human lymphocytes were stained with an isotype control (panel A) or the rabbit-chimeric version of Ki-4 (NBP2-52683) before (B) or after anti-CD3/28 activation (C) at a concentration of 1 ug/ml for 30 mins at RT. After washing, bound antibody was detected using a AF488 conjugated donkey anti-rabbit antibody and cells analysed on a FACSCanto flow-cytometer.
