VB001-NOV**VisUBlock(TM) Mouse on Mouse Blocking Reagent**

Product Information	
Unit Size	1 ml
Concentration	Please see the protocols for proper use of this product. If no protocol is available, contact technical services for assistance.
Storage	Store at 4C. Do not freeze.
Product Description	
Description	VisUBlock(TM) Mouse on Mouse Blocking Reagent effectively blocks endogenous IgG, which enables staining of mouse tissue with mouse IgG primary antibodies and eliminates unwanted background staining. Endogenous IgG poses a significant issue when using mouse IgG primary antibodies on mouse tissue: anti-mouse secondary detection antibodies will not only bind to mouse IgG primary antibodies, but also to endogenous tissue IgG. Therefore, if endogenous IgG is not blocked prior to incubation with secondary detection antibodies, intense background staining occurs which can mask specific staining generated by the primary antibody. 1.0 mL of concentrate is enough to stain 100-250 tissue sections when diluted.
Kit Components	VisUBlock Mouse on Mouse Blocking Reagent
Product Application Details	
Application Notes	Blocking reagent for use with primary antibodies from mouse host and mouse tissue. Key Benefits: Reduces background staining Enables staining of mouse tissue with mouse IgG primary antibodies
