## **NBP2-47694APC**

Cytochrome c Antibody (7H8.2C12 + CYCS/1010) [Allophycocyanin]

Product Information Unit Size	ontact technical
Concentration  Please see the vial label for concentration. If unlisted please conservices.  Storage  Store at 4C in the dark.  Clonality  Monoclonal  Clone  7H8.2C12 + CYCS/1010  Preservative  0.05% Sodium Azide  Isotype  IgG2b Kappa/IgG2b Kappa  Conjugate  Allophycocyanin  Purity  Protein A or G purified  Buffer  PBS  Product Description  Host  Mouse  Gene ID  Store at 4C in the dark.  Monoclonal  Allophycocyania  Preservative  19G2b Kappa/1gG2b Kappa  Allophycocyanin  Protein A or G purified  Buffer  PBS	ontact technical

Gene Symbol CYCS	
5	
Species Human, Rat	
Marker Mitochondrial Marker	
Specificity/Sensitivity  Cytochrome C is a well-characterized mobile electron transport essential to energy conversion in all aerobic organisms. In mam highly conserved protein is normally localized to the mitochondric membrane space. More recent studies have identified cytosolic a factor necessary for activation of apoptosis. During apoptosis, trans-located from the mitochondrial membrane to the cytosol, we required for activation of caspase-3 (CPP32). Overexpression or shown to prevent the translocation of cytochrome c, thereby blooms and the content of	mmalian cells, this Irial inter-controller cytochrome cases, cytochrome cases, cytochrome cases, cytochrome cases where it is of Bcl-2 has been ocking the induce the release hrome cases from the by Apaf-1 binds to ling to caspase-9 otal cytochrome C
apoptotic process. Overexpression of Bax has been shown to in of cytochrome c and to induce cell death. The release of cytochrome intochondria is thought to trigger an apoptotic cascade, whereby Apaf-3 (caspase-9) in a cytochrome c-dependent manner, leading cleavage of caspase-3. This monoclonal antibody recognizes to which includes both apocytochrome (i.e. cytochrome in the cytocattached) and holocytochrome (i.e. cytochrome in the mitochond attached).	dria with heme
of cytochrome c and to induce cell death. The release of cytochrome intochondria is thought to trigger an apoptotic cascade, whereby Apaf-3 (caspase-9) in a cytochrome c-dependent manner, leading cleavage of caspase-3. This monoclonal antibody recognizes to which includes both apocytochrome (i.e. cytochrome in the cytochrome in the mitochond) and holocytochrome (i.e. cytochrome in the mitochond).	dria with heme and 66-104 of
of cytochrome c and to induce cell death. The release of cytochromitochondria is thought to trigger an apoptotic cascade, whereby Apaf-3 (caspase-9) in a cytochrome c-dependent manner, leading cleavage of caspase-3. This monoclonal antibody recognizes to which includes both apocytochrome (i.e. cytochrome in the cytochrome attached) and holocytochrome (i.e. cytochrome in the mitochond attached).  Immunogen  Synthetic peptides corresponding to amino acid 1-80, 81-104 and pigeon cytochrome c (7H8.2C12); Recombinant full-length humanical contents.	dria with heme and 66-104 of
