Clathrin light chain Antibody (SPM174) [CoraFluor™ 1]

| Unit Size Concentration Please see the vial label for concentration. If unlisted please contact technical services. Storage Store at 4C in the dark. Do not freeze. Clonality Monoclonal Clone SPM174 No Preservative No Preservative Sotype LigG2b Kappa CoraFluor 1 Purity Protein A or G purified Buffer PBS Product Description CoraFluor(TM) 1 is a high performance terbium-based TR-FRET (Time-Resolved Fluorescence) donor for high throughput assay development. CoraFluor(TM) 1 absorbs UV light at approximately 340 nm, and emits at approximately 490 nm, 545 nm, 585 nm and 620 nm. It is compatible with common acceptor dyes that absorb at the emission wavelengths of CoraFluor(TM) 1 can be used for the development of robust and scalable TR-FRET binding assays such as target engagement, ternary complex, protein-protein interaction and protein quantification assays. CoraFluor(TM) 1. amine reactive CoraFluor(TM) 1. mine reactive CoraFluor(TM) 1. thiol reactive For more information, please see our CoraFluor(TM) TR-FRET technology fiver. Host Mouse Specificity/Sensitivity Recognizes proteins of 31-44kDa, which are identified as Clathrin Light Chains, which associate non-covalently to form a triskelion structure. Clathrin light chains regulates the self-assembly of triskelions onto intracellular membranes. Clathrin light chains under such as a clathrin light chain subunits (LCA and LCB) contribute to regulation of coated vesicle formation to sort proteins during receptor-mediated endocytosis and organelle biogenesis. LCA and LCB are encoded by two discrete genes. They share only 60% homology, and have certain features in common. Both LCA and LCB undergo alternative mRNA splicing, which results in the generation of tissue-specific isoforms. | Clatififf light Chair Antibody | (Or Wiff 4) [Coral laof 1] |
