| Gene Symbol                 | AHNAK                                                                                                                                                                                  |
| Species                     | Human, Mouse                                                                                                                                                                           |
| Specificity/Sensitivity     | The mouse monoclonal antibody EM-09 reacts with AHNAK, a 700 kDa multi-functional adaptor protein expressed mainly in epithelial cell, various types of muscle cells and immune cells. |
| Immunogen                   | Bacterially expressed fragment of N-terminal domain of human AHNAK1.                                                                                                                   |
| Product Application Details |                                                                                                                                                                                        |
| Applications                | Western Blot, Immunocytochemistry/ Immunofluorescence, Immunohistochemistry, Immunohistochemistry-Frozen, Immunoprecipitation                                                          |
| Recommended Dilutions       | Western Blot, Immunohistochemistry, Immunocytochemistry/ Immunofluorescence, Immunoprecipitation, Immunohistochemistry-Frozen                                                          |
| Application Notes           | Optimal dilution of this antibody should be experimentally determined.                                                                                                                 |
