Product Description		
Description	Frozen tissue slides are ideal for rapid cellular localization of RNA and protein expression, especially for antibodies that don't recognize paraffin embedded tissue.	

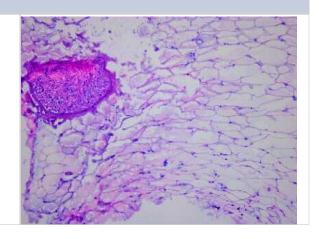

Tissues were snap frozen in liquid nitrogen immediately after excision, and embedded in OCT. The tissue sections are 5-10um in thickness, mounted on

	positively charged glass slides, and fixed by cold acetone. At least one of the tissue slides from each lot was stained with H & E for quality assurance.
