<b>Product Description</b>	
<b>Description</b>	<p>Frozen tissue slides are ideal for rapid cellular localization of RNA and protein expression, especially for antibodies that don't recognize paraffin embedded tissue.</p> <p>Tissues were snap frozen in liquid nitrogen immediately after excision, and embedded in OCT. Frozen tissue sections in each pair are prepared from the same donor. Tissue sections are 5-10 m in thickness, mounted on positively charged glass slides, and fixed by cold acetone. At least one of the tissue slides from each lot was stained with H &amp; E for quality assurance. Product is supplied as 5 diseased slides and 5 adjacent normal slides.</p>
