Immunocytochemistry/Immunofluorescence: Neuregulin-1/NRG1 Antibody (NRG1/2752) [NBP2-79713] - Confocal immunofluorescence of PFA-fixed MCF-7 cells using Neuregulin-1/NRG1 Antibody (NRG1/2752) followed by Goat-anti Mouse CF488 (green) and RedDot is used to label the nuclei red.

Protein Array: Neuregulin-1/NRG1 Antibody (NRG1/2752) [NBP2-79713] - Analysis of Protein Array containing more than 19,000 full-length human proteins using Neuregulin-1/NRG1 Antibody (NRG1/2752). Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (Monoclonal Antibody) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProt(TM) array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProt(TM) are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a Monoclonal Antibody to its intended target. A Monoclonal Antibody is considered to specific to its intended target, if the Monoclonal Antibody has an S-score of at least 2.5
