| Specificity/Sensitivity     | Recognizes a carbohydrate determinant of Gal 1-3(Fuc 1-4) GlcNAc which is<br>blood group antigen Lewis A. It is present primarily on epithelial cells such as<br>colon and kidneys. In the tumors and dedifferentiated tissues, decrease of Lewis<br>A antigen was observed. Lewis A (type 1 chain) is expressed in colonic epithelial<br>cells and may be useful for detection of gastrointestinal tumors, pancreatic<br>cancer, and colorectal tumors. Blood group related antigens represent a group of<br>carbohydrate determinants carried on both glycolipids and glycoproteins. They<br>are usually mucin-type, and are detected on erythrocytes, certain epithelial cells,<br>and in secretions of certain individuals. Sixteen genetically and biosynthetically<br>distinct but inter-related specificities belong to this group of antigens, including A,<br>B, H, Lewis A, Lewis B, Lewis X, Lewis Y, and precursor type 1 chain antigens. |  |
