Product Description	
Description	This recombinant antibody is a chimeric antibody created by replacing the mouse heavy and light constant regions of clone L127/12 with chicken IgY heavy and light constant regions. As such this antibody retains the same binding performance as the original clone L127/12 but can be detected using standard anti-chicken secondary antibodies allowing flexibility for multiplexing applications. This antibody is expressed recombinantly in HEK293 cells and then affinity purified from the cell culture media and buffer exchanged into 1X PBS.

Species	Human, Mouse, Rat
Specificity/Sensitivity	Cross-reacts with GAD25, GAD44 and GAD65/GAD2
Immunogen	Fusion protein amino acids 1-594 (full-length) of human GAD65/67 (Uniprot#: Q99259) produced recombinantly in E. Coli

Product Application Details

Representative section of formalin fixed, paraffin-embedded rat brain cerebellum stained with NBP3-52354 (the BSA Free version of this antibody) (green) at 1:100 dilution. DAPI (blue) shows cell nuclei. This antibody stains neuropil granules identifying GABAergic synapses, Purkinje cell bodies, and the synaptic terminal of GABAergic interneurons in the molecular layer of the cerebellum. Magnification 100X.

Western blotting of rat brain homogenate with GAD65/67 mouse monoclonal antibody (A) and NBP3-52354 (the BSA Free version of this antibody) (B). The mouse monoclonal antibody and chicken monoclonal antibody were detected with anti-mouse-HRP and anti-chicken-HRP, respectively. The chicken monoclonal antibody recognizes endogenous GAD65/67 with similar sensitivity as the mouse monoclonal antibody in the rat brain homogenate at ~65-67 kDa.
